

MAGNI 107

MAGNI 107 BRAKE DISC AND DRUM COATING

Magni 107 is a chrome-free, waterborne coating engineered specifically for brake discs and drums. Composed primarily of zinc and aluminum, and a hybrid resin system, Magni 107 provides exceptional corrosion resistance.

Unlike other waterborne zinc-rich coating systems, Magni 107 is stable during shipping, storage and the application process. Magni 107 offers a premium metallic appearance and frictional output similar to an uncoated braking surface. Therefore, it can be applied to braking surfaces without concern of spalling or galling early in the braking cycle.

- Applied via spray or dip-spin application methods
- Can be applied in thin layers, providing cost-effectiveness without sacrificing durability
- Cured film provides a high level of sacrificial corrosion protection and is an excellent choice when environmental damage is expected

PERFORMANCE DATA*:

Coating thickness	30-40 microns
Color	Black
Cyclic environment SAE J2334:	>120 cycles
Neutral salt spray ISO-9227:	>240 hours

OEM SPECIFICATIONS:

Volkswagen (Pending)

*Typical Values - refer to OEM Specifications and Magni Application Guidelines for official specifications
